#### 4.3.2 - Institution has an IT policy, makes appropriate budgetary provision and updates its IT facilities including Wi-Fi facility

The Institute's Information, Communication, and Technology (ICT) Unit is well-equipped with state-of-the-art ICT resources and provides effective services to the Institute's academic and administrative activities. The Institute follows a well-defined IT policy, which is guided by its Computer Committee. At the beginning of each academic year, the Computer Committee conducts a needs assessment for the replacement, upgrade, or addition of existing infrastructure based on suggestions from its members. It reviews the requirements, budget constraints, and working conditions of existing equipment according to student and faculty grievances.

The Institute's IT policy mandates the replacement of computers with the most recent configurations every five years. Each year, the Annual Maintenance Contract (AMC) for deployed software applications and ICT equipment such as desktops, laptops, and networking devices is renewed at the start of the academic year. To monitor and protect its ICT infrastructure, the Institute implements robust security and management policies. Periphery Network Security employs firewalls, Wi-Fi controllers, antivirus software, and Unified Threat Management devices to guard against external cyber-attacks and malicious software.

All web pages on the Institute's website use a Content Management System (CMS) and are developed with GIGW compliance in mind. The operation of the ICT system is protected against inappropriate
