7.1.3 - Describe the facilities in the Institution for the management of the following types of degradable and non-degradable waste (within 200 words)
Solid waste management **Liquid waste management** **Biomedical waste management** **E-waste management** **Waste recycling system**
Hazardous chemicals and radioactive waste management

Solid waste management is among the fundamental services provided and overseen by the Institute to ensure the cleanliness of the campus. Each room within the campus is equipped with a dustbin, and similar bins are placed across all premises. The solid waste generated from the campus's canteen, dining hall, offices, classrooms, hostel, and residences undergoes daily collection and

segregation into wet, dry, and plastic waste categories. This segregation is carried out by the sewerage operations department of the Municipal Corporation. A well-structured drainage system serves the purpose of managing liquid waste within the campus, adhering to the norms and regulations set forth by the BMC. E-waste is generated by IIPS from condemned computers and electronic equipment. However, the institute manages the disposal of e-waste, including movable and immovable items, surplus, condemned, scrap, obsolete materials, equipment, machinery, properties, and miscellaneous articles, by selling them through agreements with the Metal Scrap Trade Corporation Limited (MCTC). While IIPS has not implemented a waste recycling system, it ensures the proper disposal of all types of waste generated on its campus, following the specified norms outlined by the BMC. IIPS does not generate biomedical waste or hazardous chemicals and radioactive waste, thus negating the need for managing the disposal of such items.
